Car Sales program logic

Alex Hunt
22/10/20

Requirements of the program;

- Log all employees who sign in for the week (range of 3-6)
- Log the number of cars sold by each employee and save to external file
- Calculate the number of cars sold by the company that week
- Output the name and number of cars sold by the top-selling employee of the week

Ensure that;

- It is efficient, robust and maintainable
- Suitable data structures are used
- All car sales are recorded as whole numbers (integers)
- The program is tested to its extremes
